

Chandelier Installation

1. Open the outer box to find out each parts and carefully place them on a clean counter. Prevent chandelier body from scratching and colliding.
2. Find the chandelier body and make sure that the it has been connected well as shown in the figure. The wires in the junction box shall not be exposed or crushed.
3. Use the specified type of bulb for the light fixture.
4. Connect the chain to the chandelier body and adjust its length according to the appropriate height. When connecting the wires of the chandelier body, be sure to turn off the main power and connect them in accordance with the corresponding polarity.
5. After finish installing, check whether the assembled chandelier body is balanced and secure. Turn on the switch to check whether the chandelier runs normally.
